

# Attention Leading Edge Energy Managers the latest solution in power monitoring is here!

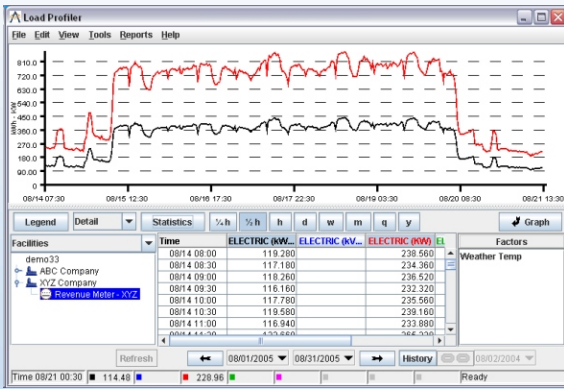

**Entelligence** helps companies better understand how they use electricity. While utility bills give simple usage and demand data, **Entelligence** indicates when and where power is consumed. This allows companies to save money through operational changes and allows them to track the impacts of those changes. Anyone managing energy needs **Entelligence**.

Plot kWh consumption and kW demand data to understand how you use power over any selected period.  
Retrieve summary statistics including peak demand, total consumption, and load factor.

Easily zoom in on selected periods for a closer look.

Look at long periods to understand your load profile.

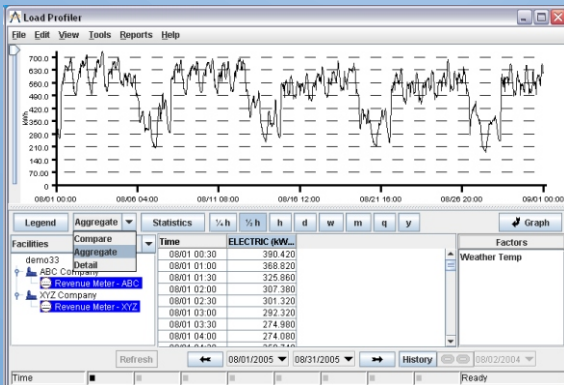

Compare current data with historical data to understand the impact of operational changes.

Compare data from two different facilities or sub-meters to benchmark one operation against another.

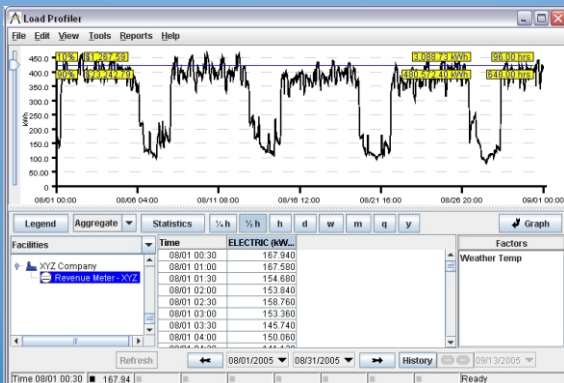

In addition to this great functionality, **Intelligence** now has even more to offer, including: automatic monthly email reports, load variance notification, load profile report, cost calculation report, and easy data export.

Aggregate data from two different facilities or sub-meters to see and understand your overall load profile.

Plot data with weather temperatures to understand weather sensitivity.

In aggregate mode, use the "slider bar" to estimate the cost benefit of demand side management.

Query up to five days forward to receive a consumption and demand forecast based on the past five weeks.
